Adapting to Change

What do you do when you have counterbending dies with both versions of mounting? Simple, you contact your local dealer or sales representative and ask them to get the new **CBADP**, counterbending die adaptor plate. This high quality, machined, aluminum bracket enables users to quickly interchange between both mounting styles of counter bending dies.

Yes, Ercolina[®] is changing the mount of all counter bending dies to the drop-in, dovetail mount. This change will not happen overnight and the **CBADP** bracket is the solution. Just another example of Ercolina[®] ingenuity at work.
